LIST

Cari collaboratori,

Siamo lieti di presentarvi il nostro listino prezzi 2023, che sarà in vigore il 1 ° Gennaio 2023.

Speriamo che lo troviate veloce e facile da usare. Tutte le voci del catalogo sono elencate nella pagina degli indici per facilitarne la ricerca.

Ricordiamo che ITALAMP offre anche la possibilità di adattare i nostri prodotti al fine di soddisfare le esigenze di specifici progetti di contract.

Sarà necessaria una consultazione e uno studio tecnico preliminare.

Visitate ITALAMP.COM per tutti i dettagli tecnici. Una galleria di immagini con foto ad alta risoluzione dei prodotti nel nostro catalogo e modelli 3d sono disponibili anche sul nostro sito Web.

ITALAMP si riserva il diritto di modificare i prezzi in questo listino prezzi senza preavviso.

Vi ringraziamo per la cortese collaborazione e restiamo a vostra disposizione.

Dear friends,

We are pleased to present you our 2023 price list, which comes into force on January 1st 2023.

We hope you find it quick and easy to use. All catalogue entries are listed on the index page to make it easier to search.

We remind you that ITALAMP also offers the possibility to adapt our products in order to meet the needs of specific contract project. A consultation and prior technical study will be necessary.

Please visit ITALAMP.COM for all technical details. An image gallery with high resolution photos of the products in our catalogue and 3d models can be also find in our website.

ITALAMP reserves the right to change the prices in this price list without prior notice.

We thank you for your kind cooperation, and we remain at your disposal.

All products in the ITALAMP collections are carefully created using craft techniques and for this reason certain details may vary from product to product.

These variations are not imperfections but characteristic peculiarities of the production process.

All aluminium furniture items are guaranteed 3 years against corrosion or other deterioration.

All steel furniture items have received High Protection Zinc Treatment and are guaranteed 1 year against corrosion or other deterioration.

ITALAMP reserves the right to modify its products in order to improve its features.

The reproduction on paper of products may result in a misrepresentation of some colors.

Measurements are in cm.

For updated technical data please refer to our website.

All products are  certified.

CRISTALLO - CRYSTAL

La realizzazione del cristallo risale al 1700 circa e da allora è ricercato per la sua straordinaria bellezza, sinonimo di ricchezza e nobiltà di una materia viva e lucente che sprigiona un fascino antico. Il cristallo infatti è un vetro che possiede particolari peculiarità di lucentezza, trasparenza, elasticità e sonorità. La differenza sostanziale con il vetro è data dalla ricchezza di sostanze chimiche nella miscela di cui è formato e che la temperatura di fusione è molto più alta. Il cristallo ha una maggiore rifrazione e risulta perciò più lucente, ed è più sonoro del vetro.

The production of crystal dates back to seventeenth century and since then crystal has been sought after for its extraordinary beauty, synonymous with wealth and nobility of a living material which brightness emanates an antique charm. Indeed crystal has particular quality of brightness, transparency, elasticity and sound. The main difference with the glass is given by the richness of the chemical formula it is made of, and that the temperature is much higher. The crystal has a higher refractive index and is therefore brighter than glass.

VETRO - GLASS

Da 5.000 anni il vetro fa parte della nostra vita. Trasparenza, compattezza strutturale, inerzia chimica e biologica e compatibilità ecologica sono alcune delle uniche caratteristiche del vetro. Tutti i nostri prodotti sono realizzati con tutte le caratteristiche di qualità e garanzia del Made in Italy.

Glass has been part of our lives for 5,000 years. Transparency, structural compactness, chemical and biological inertia and ecological compatibility are some of the unique properties of the glass. All our products are manufactured according to the standards of quality and warranty of Made in Italy.

IP Rating option

On request, Italamp can provide, for most of its wall lamps, IP rating higher than IP20. The selected product will be revised by our engineering department in respect of the aesthetic and technical requirements of the customer. A cost difference may occur.

Dimensions, weights and volumes

Dimensions, weights and volumes listed in this pricelist are to be considered approximate and may be slight different depending on products' materials and handwork processes.

General Informations

Each item is equipped with its own documentation including a certificate of authenticity and a card with instructions for quality control inspections. In case of complaint the customer should send us a copy of this card, which also contains instructions for the correct assembling of the fixture. Italamp is not liable for incidental injuries or damage to people or things due to: incorrect installation of the fixtures, use of not suitable bulbs, modification of the original technical features of the items. Any slight irregularities only confirm the high value and uniqueness of the product. The company has the right to modify any model for both aesthetic and technical features when necessary, according to Italamp's unquestionable judgement. Our models are not provided with bulbs.

CASAMBI - Bluetooth control System

Dimming system

Descrizione - Description

CBU-ASD è una unità di controllo Bluetooth per driver LED e trasformatori elettronici con interfaccia dimmer 0-10 V, 1-10 V o DALI.

CBU-ASD is a Bluetooth control unit for LED and halogen drivers with 0-10V, 1-10V or DALI dimming interface.

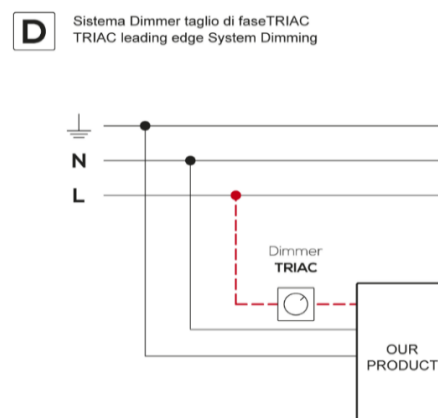

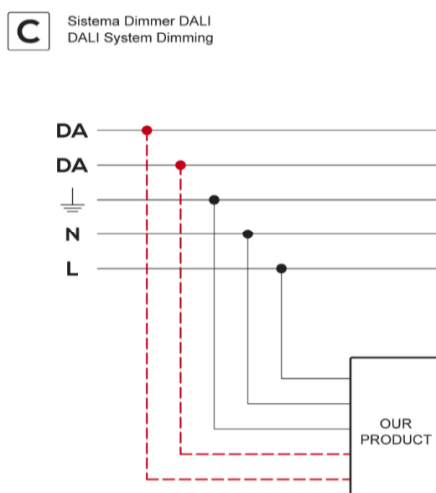

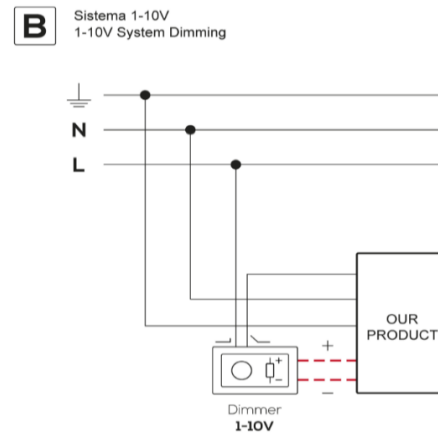

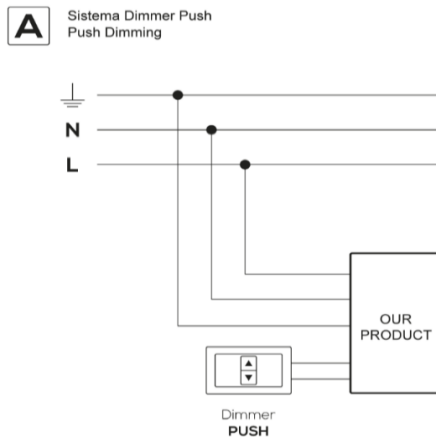

CBU-TED è una unità di controllo Bluetooth a taglio di fase per lampade ecoalgene, lampade LED dimmerabili e driver LED dimmerabili a taglio di fase
CBU-TED is a Bluetooth controllable trailing-edge dimmer for phase control of incandescent lamps, dimmable LED lamps and dimmable LED control gear

GENERAL INFO:

Controllo Bluetooth
 Non è necessario un dispositivo gateway esterno
 Crea una rete Bluetooth mesh veloce
 Dimensioni molto piccole per l'installazione nell'apparecchio
 Uscita analogica / digitale configurabile
 Uscita analogica: sinking / sourcing 0-10V
 Uscita digitale: standalone DALI
 Dimmerazione tramite pulsante a parete standard

Bluetooth controllable
 No need for an external gateway device
 Forms automatically a fast Bluetooth mesh network
 Very small form factor for luminaire installation
 Configurable analog/digital output
 Analog output: 0-10V sinking/sourcing
 Digital output: Standalone DALI
 Dimming from standard push wall switches

A richiesta: lampadine a LED dimmerabili ove possibile - On request: Dimmable LED bulbs where possible

* Prezzi validi fino a 20Pz. Per q,tà superiori, quotazione a richiesta

* Prices valid up to 20Pcs. For higher qty, quotation on request

Lampadina dimmerabile. La compatibilità con i sistemi di dimmerazione è indicata nelle specifiche di ogni prodotto
Dimmable bulb. Compatibility with dimming systems is indicated in the specs of each product.

Lampadina non dimmerabile - Not Dimmable

Dal 1975 ITALAMP produce le migliori espressioni del vetro avvalendosi del patrimonio artigianale della vetreria di qualità.

Un quarantennio di esperienza nel quale abbiamo ideato i vetri delle nostre lampade facendoli produrre dai più abili maestri vetrai, conquistando così un prestigio riconosciuto nel mondo dell'illuminazione decorativa. Questa esperienza ci consente di saper anche oggi selezionare la migliore produzione, nonostante la filosofia industriale diffonda un'idea "tecnicistica e perfetta", in un mondo che trae il proprio vanto dalla "maestria imperfetta" del lavoro artigianale.

Per questo vogliamo descrivervi, brevemente, come sono prodotti i diffusori delle lampade che avete acquistato, i loro pregi e le loro caratteristiche.

Il vetro è soffiato a bocca all'interno di stampi, in legno o metallo, in più strati sovrapposti, levati di volta in volta dai crogiuoli, dove giace liquido ed incandescente. È in questi forni che prende vita, dalla sabbia di silice che, mischiata ai fondenti, agli affinantanti ed agli ossidi coloranti, fonde per tutta la notte a 1350 gradi. In questo processo la materia inerte diventa animata liberando la vita che è in sé sottoforma di gas, bolle, formazioni calcaree ed impurità. L'abilità dei maestri sta nel coglierne poi la parte più pura per la lavorazione.

SOFFIO A STAMPO

Come già accennato, questa tecnica prevede l'utilizzo di uno stampo all'interno del quale il maestro inserisce la canna con la massa di vetro incandescente, preparato per essere soffiato a bocca fino a farlo aderire alle pareti dello stampo, per estrarlo poi, una volta raggiunta la forma dell'oggetto. Ciò consente ovviamente di ottenere diffusori uguali tra loro anche se, conservano un carattere di unicità dovuto alla distribuzione del vetro, spessore e sfumatura del colore che li rende uguali ma non identici. Il soffio a stampo si suddivide in ulteriori due categorie che, pur seguendo la stessa tecnica produttiva, presentano sostanziali differenze: il soffio a giro ed il soffio a fermo.

VETRO SOFFIATO A GIRO

In questa categoria si annoverano le forme ottenute da una rotazione completa del soffio, attorno all'asse della forma.

Il vetro viene soffiato all'interno di uno stampo o guidato da una sagoma in grafite, fino ad ottenere pienamente la forma stabilita. L'utilizzo di questa tecnica consente di ottenere effetti di notevole pregio artistico grazie ad una laboriosa e sapiente preparazione del vetro fino ad ottenere diffusori di volume considerevole.

VETRO SOFFIATO A FERMO

Per tutte le forme per le quali non è quindi possibile ottenere la rotazione, si ricorre allo stampo a fermo. Contrariamente allo stampo a giro, con questo tipo di soffio, si possono ottenere forme inconsuete che si spingono talvolta ai limiti fisici della capacità umana, il vetro è preparato in modo da poter raggiungere egualmente tutti i punti dello stampo con una notevole maggiore difficoltà, ottenendo forme esaltanti dal punto di vista del design.

CRISTALLO E LAVORAZIONI

Il cristallo ha le stesse caratteristiche compositive del vetro "calcio sodico", con la particolarità di avere in composizione di ossidi speciali, per poter essere considerato appunto "Cristallo". La viscosità è inferiore, quindi più pastoso (duro) nella lavorazione, mentre invece è più tenero nella lavorazione successiva, che è costituita fondamentalmente da incisioni con mole e rotine, per ottenere tutti gli intagli presenti nei nostri diffusori. Va sottolineato che tutte le incisioni sono unicamente "manuali" e richiedono lunghi tempi di lavorazione, ciò ad esaltare l'alto livello di maestria artigianale che conferisce particolare brillantezza e iridescenza alle superfici.

PRINCIPALI CARATTERISTICHE FISILOGICHE DEL VETRO LAVORATO

Viste le premesse, diremmo che, a seconda del tipo di soffiatura, che viene usata per la lavorazione e, a seconda delle caratteristiche di ogni singolo diffusore, forma, dimensione, colore e decori, il vetro, sia calcio-sodico, cristallo o borosilicato, porta con sé alcune caratteristiche fisiologiche che rientrano nei margini di accettabilità e di cui diamo di seguito descrizione dei più comuni.

BOLLICINE, BOLLE E CONCREZIONI

Per effetto delle sostanze affinantanti, una buona fondita elimina alla fonte, quasi totalmente, queste formazioni gassose e calcaree che però possono ripresentarsi, in fase di lavorazione, in misura estremamente contenuta ed accettabile. Fanno parte della natura del vetro, come i nevi della ns pelle, e sono una certificazione della artigianalità della lavorazione. Esse sono bollicine minuscole o bolle, di diametro massimo circa 3mm, e granuli calcarei che si formano in fase di fusione. Il Controllo Qualità ITALAMP seleziona a monte questi aspetti con un adeguato criterio di tolleranza.

OMBREGGIATURE DEL BIANCO

Particolarmente nei vetri di grandi dimensioni e soffiati a fermo, si possono comunemente verificare delle ombreggiature nel bianco, sottoforma di macchie, fasce o zone, che non sono altro che un ispessimento del vetro "lattimo". Ciò si verifica a seguito di una diversità di raffreddamento delle varie zone del vetro durante la lavorazione. Nonostante la perizia, questo fenomeno non è totalmente evitabile.

PLANARITA' DELLE SUPERFICI

Alcuni diffusori presentano superfici piane, più o meno estese. Questi diffusori, come altri, sono soffiati a fermo e le superfici piane, non strutturate da curvature, anche lievi, o sagomature, possono essere soggette a lievi deformazioni quali concavità o convessità. Questo fenomeno è dovuto alla differenza di spessore del vetro e quindi ad una variazione del ritiro dello stesso.

CONTROLLO QUALITA'

Il Controllo Qualità di ITALAMP esamina, da sempre, il 100% dei vetri ricevuti, prima che questi siano spediti al cliente. I criteri di selezione variano, ovviamente, a seconda del tipo di vetro, tenendo conto del grado di difficoltà e delle caratteristiche fisiologiche già illustrate. La tolleranza applicata è frutto della nostra lunga esperienza e tiene in grande rispetto la maestria con cui queste opere artigianali sono eseguite.

CONSIGLI PER LA PULIZIA E LA MANUTENZIONE

Prima di effettuare qualsiasi operazione di pulizia o manutenzione, raccomandiamo di togliere la spina dell'apparecchio dalla rete elettrica (apparecchi da tavolo e terra) o di assicurarsi che l'alimentazione sia scollegata tramite l'interruttore generale. Quindi consultare le istruzioni di montaggio e manutenzione per evitare manipolazioni incaute e rischiose per la propria sicurezza.

PULIZIA DEI DIFFUSORI

Raccomandiamo di eseguire frequentemente la pulizia dei diffusori, sia in modo leggero e quotidiano, sia con periodici lavaggi. La pulizia mantiene la brillantezza del vetro e garantisce l'efficienza luminosa dell'apparecchio.

Pulizia leggera: Consigliamo di spolverare semplicemente le superfici con piumino o passare leggermente con panno umido d'acqua, solo i diffusori o i decori con superficie lucida.

Lavaggio periodico: Si effettua quando pulviscolo ed umidità ambiente abbiano depositato, nel tempo, una patina che ne altera la brillantezza e la trasparenza.

Consigliamo quindi di smontare il diffusore, consultando le istruzioni di montaggio.

Preparare quindi una soluzione di acqua ed aceto al 10% e lavare il vetro con una spugna morbida, pennello o panno morbido. Evitare materiali abrasivi. Lasciare quindi sgocciolare ed asciugare. L'aceto è delicato ed è da sempre la migliore soluzione sgrassante che dona al vetro particolare brillantezza. Evitare l'immersione nel liquido, o la colatura, per le parti di decoro saldate a gesso. Per qualsiasi tipo di pulizia e superficie, sia diffusore che montatura, evitare l'uso di sostanze abrasive, solventi, detersivi aggressivi ed alcool puro.

Italamp has been producing the best expressions of glass since 1975, making use of the craft made heritage of quality glassware. A 40-year experience in which the most skilled experts have been making the glass of our lamps achieving a prestige that is now recognized by all the world of the decorative lighting. This experience allows us, yet today, to select the best production, despite the "perfect and technical" idea conveyed by the industrial philosophy, in a world that prides itself from the "imperfect mastery" of handcraft.

For this reason, we want to briefly describe how the diffusers of the lamps you have bought are made, their qualities and characteristics.

The glass is mouth blown into some moulds made of wood or metal in overlapping layers, taken off from the crucibles where the glass is liquid and incandescent. It is in these ovens that it comes to life, from the silica sand that, mixed with the melting agents, the refining agents and the coloring oxides, melts for all the night at 1350 degrees. During this process the inert substance becomes animated and gives life to gas, bubbles, limestone formations and impurities.

MOULD BLOW

As mentioned above, this technique requires the use of a mould in which the master inserts the blowing cane with the mass of incandescent glass prepared to be mouth blown until it sticks to the walls of the mould in order to take it out when the shape of the object is reached. This allows to get diffusers which are identical one to the other even though they keep their unicity thanks to the distribution of the glass, to the thickness and shade of the colour that make them the same but not identical. The mould blow is divided into other two categories that, despite following the same manufacturing process, present substantial differences: the round blow and the steady blow.

ROUND BLOWN GLASS

This category includes the shapes obtained by a complete rotation of the blow around the axis of the shape. The glass is blown inside a mould or it is leaded by a graphite shape until it gets the established form. The use of this technique allows us to obtain remarkable artistic effects due to a laborious and skillful preparation of the glass that assures diffusers which have a considerable volume.

STEADY BLOWN GLASS

For all those shapes for which the rotation is not possible, we use the steady mould. Contrary to the round mould, with this blow we can get unusual shapes that sometimes reach the limits of human skills. The glass is prepared in order to reach in the same way all the points of mould with a major difficulty. This gives amazing design forms.

CRYSTAL AND PROCESSING

The crystal has the same constituent characteristics of the "Calcium Sodium" glass, with the peculiarity of having special oxides in order to be considered as "crystal".

The viscosity is lower and this makes the working harder, while it is softer in the following processing which is made of incisions that characterize our diffusers. It should be noted that all the cuts are "handmade" and require a long processing time. This exalts the level of the craftsmanship that gives particular brilliance and iridescence to the surfaces.

MAIN PHYSIOLOGICAL CHARACTERISTICS OF PROCESSED GLASS

In light of above, we should say that, according to the type of blowing used for the processing, and to the characteristics of each diffuser (shape, dimension, colour and decoration) the glass, either calcium sodium, crystal or borosilicate, has some specific physiological features that are inside the margins of acceptability. We will now describe the most common ones.

BUBBLES AND CONCRETIONS

Due to the refining substances, a good fusion eliminates, at source, almost all these limestone and gas formations that could, however, arise again during the processing, in a limited and acceptable way.

They are part of the glass nature, like moles for our skin, and certificate the craftsmanship of the working. They are tiny bubbles of maximum 3 mm and limestone granules that develop during the melting process. ITALAMP's quality control selects these aspects with an adequate tolerance criterion.

WHITE SHADING

Shading in the white colour may occur in particular in large and steady blown glass. This might happen in the form of stains, stripes or areas that are nothing but a thickening of the "lattimo" glass.

This occurs after a diversity in the cooling process of the various areas during the working procedure. Despite the expertise, this phenomenon is not entirely inevitable.

PLANARITY OF THE SURFACES

Some diffusers have a flat surface, more or less extended. These diffusers, as well as others, are steady blown, and the flat surfaces without curvatures, even the lightest ones, or without shaping, can be slightly deformed with concavities or convexities. This phenomenon is due to the different thickness of the glass and, therefore, to a variation in the recession.

QUALITY CONTROL

Italamp's quality control has always checked 100% of the received glass before it is delivered to the client. The selection criteria vary, of course, according to the type of glass, considering also the level of difficulty and of the physiological characteristics already illustrated. The applied tolerance is the result of our long-lasting experience and highly respects the mastery with which these crafts works are made.

CLEANING AND MAINTENANCE TIPS

Before making any cleaning operations, we recommend removing the plug of the device from the electricity grid (table or floor device) or making sure that the power source is disconnected through the master switch. Then consult the assembly and maintenance instructions to avoid incautious and risky manipulations dangerous for your own security

DIFFUSERS CLEANING

We recommend cleaning the diffusers frequently, both in a daily and light way and with periodical washing. The cleaning keeps the brilliance of the glass and guarantees the bright efficiency of the device.

Light cleaning: We suggest dusting the surfaces with just a feather duster or using a cloth moist with water only on the diffusers or on the decorations with a glossy surface.

Periodical washing: to be made when dust and humidity have dropped off, over time, a patina that changes its polish.

Therefore, we suggest disassembling the diffuser, and consulting the assembly instructions. Then prepare a water and vinegar solution at 10% and wash the glass with a smooth sponge, with a brush or a soft cloth. Avoid abrasive material.

Leave then to drip and to dry.

The vinegar is delicate and has always been the best degreasing solution that gives the glass a special polish.

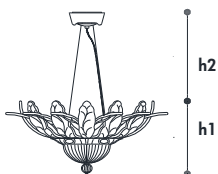

Avoid immersing in liquid, or the dripping, for the plaster welded decorations.

Avoid the use of abrasive substances, solvents, aggressive detergents and pure alcohol for any kind of cleaning and surface of both diffuser and assembling.

All products in the ITALAMP collections are carefully created using craft techniques and for this reason certain details may vary from product to product.

These variations are not imperfections but characteristic peculiarities of the production process. ITALAMP reserves the right to modify its products in order to improve its features.

The reproduction on paper of products may result in a misrepresentation of some colors.

Measurements are in cm.
For updated technical data please refer to our website. All products are  certified.
